Brand New Book \*\*\*\*\* Print on Demand \*\*\*\*\*.Excerpt from Essentials in the Theory of Framed Structures This book, designed primarily for class-room use, contains no new principles. The same fundamental ideas to be found in many other books are here set forth by a treatment so different from the orthodox method that a word of explanation seems justifiable. There is a growing tendency in engineering schools to instruct rather than to educate; to pour in rather than to draw out; to feed the mind with memoranda until it becomes sluggish for lack of exercise in the intellectual realms of the imagination and reason. This tendency is, to a large extent, the result of current text-book and class-room methods which present mathematical principles in generalities first and particulars last. This order is undesirable for two reasons: First, it is not the sequence most natural for the grasp of the human intellect, for the history of any science will show that its development has been accomplished by progress from the particular to the general. Second, if generalities are considered first, the principle is unfolded to the class by deriving a formula. Once developed, this formula is memorized, and all subsequent problems are solved by merely making numerical substitutions for the various symbols. Thus, the student gets but a passing glance at the fundamental idea and a meager conception of the principle involved. This experiment was tried in nearly one thousand cases with the result that about 93 per cent of the students were found to be helpless without the formula.
