The average age of the subjects was about 25 years. The subjects were mostly graduate students in the University of Liverpool, but some of them were older people of the teaching staff in Chemistry and Physics. Two were school boys of 15 years, whose results are just as good as those of the others, illustrating the simplicity of the method. Of the subjects used in these final measurements, three were kind enough to come twice. Fig. 3 gives their data. The points show the type of result which we obtained, and at the same time give an idea of the degree of reproducibility of the results under the experimental conditions. In Fig. 3 the ordinates are the logarithms of the relative energy necessary to match the radium paint in brightness. A logarithmic scale is used because a direct...
