RareBooksClub. Paperback. Book Condition: New. This item is printed on demand. Paperback. 42 pages. Dimensions: 9.7in. x 7.4in. x 0.1in. This historic book may have numerous typos and missing text. Purchasers can download a free scanned copy of the original book (without typos) from the publisher. Not indexed. Not illustrated. 1884 Excerpt: . . . other at the points c and d. These four points will be the horizontal traces, and lines through a and b parallel to rs and through c and d parallel to tu will be the plans of the lines in which the cylinders are cut by the plane of which the line qr is the horizontal trace. The points where these lines intersect determines four points in the plan of the intersection of the cylinders. In like manner by drawing lines parallel to rq, assuming these to be the horizontal traces of cutting planes parallel to the first, and drawing lines parallel to rs and tu through the points where these horizontal traces meet the ellipses, other points in the plan of the intersection can be found. 1 To find the elevation draw perpendiculars to XY from the points where the horizontal traces of the cutting planes meet the ellipses, and through the points where these perpendiculars meet XY draw lines parallel to rv and fit. These will be the elevations of the lines in which the planes cut the cylinders. The elevation required is determined by the intersection of these elevations. As in the preceding examples, all the lines and planes should be numbered; all lines in the same cutting plane having the same number. The student will notice that the points in the curve of intersection are found from the intersection of those lines having the same number....
